

**HURRICHILL™**

Blast Chillers & Shock Freezers

AP20-XL

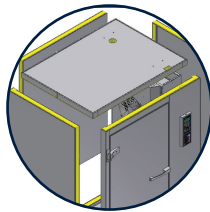

Versatility built for everyone

The next big addition to the blast chiller family. The AP20-XL is not just a modular version of our popular AP20 unit, it is a redesigned example of versatility and performance. Versatile for kitchen designers and consultants, versatile for installers and service tech, versatile for managers and operators.

Self-contained

On site restrictions and remote refrigeration is a thing of the past.

Modular

Assemble in place for versatility and easy installs anywhere.

Cart Versatility

Accepts any current cart from any oven. Use the cart you have!

Designers & Consultants

Large capacity and small footprint are perfect for existing kitchens or new builds.

Site restrictions are a thing of the past with modular systems, they are built on site. Small doorways, stairs and elevators are no longer an issue.

Self contained systems means less install time, saving money and reducing build time.

Installers & Service

Self-contained systems means no running long lines to the roof or exterior of the building for a remote system, everything is in one place.

Our system also comes **pre-charged** with refrigerant, so no spending time charging a new system.

New quick connects for the refrigeration and electrical lines. Simply securely connect the ends together and you are ready to start chilling or freezing.

Managers & Operators

Your oven, Our chiller - the large doorway and interior capacity allow for you to use any current oven cart in the AP20-XL. Use whatever cart you have and it will roll right into our chiller, no more matching oven to chiller.

Large capacity in a small footprint. 200 lbs. of product chilled in < 90 min. and freeze 120 lbs. in < 240 min., all in a self-contained compact high performance package.
